## Diagram 2: Examples of Roles and Collaboration for Data Sharing Functions for Value-Based Payment

## Individual Provider/Payer

- Follow regional/national standards for coding, vocabulary, exchange
- Keep provider directory current
- Join/support relevant regional and national initiatives
- Create/use available national shared services

Create/use appropriate

regionally shared

directories, data

services (e.g., MPI,

## **Nationwide Entities**

- Develop consensus national standards for data content and interoperability; model contracts, templates
- Provide data (e.g., national plans, commercial sources, federal agencies)
- Set payment models, reporting requirements, other rules (federal)
- Create/use regional or national shared

services

## **State/Regional Entities**

- Create/maintain enablers, e.g., all-payer claims database, quality measurement/reporting, health information exchange, qualified entity
- Provide consulting services, e.g., analytics, quality improvement, benchmarking, research

This diagram illustrates the importance of the various layers of support—the enterprise supporting the APM, and the regional and national data supports for the data sharing infrastructure. It provides examples of the types of functions that might best be supported at each level.
